Mobile Coupons

Our unique couponing wizard provides a graphical interface with a built-in redemption feature which includes automated barcode creation, promotion code development, and more. Choose our WAP feature, use a simple and effective sms, or both. Choose the options that are right for you and your business.

Design Made Easy

When you design a coupon, you can choose between using a template which we've generated for your convenience or use a custom image of your own. With our template feature, we have a stockpile of images to use to help identify your product and add decor.

Personalization & Branding

If you have uploaded personal information associated with the phone numbers, you can use merge tags to personalize the message and add brand value to the coupon. Create a comfortable rapport with your customers, let them know you know who they are! This familiar approach gives peace of mind to your customer when choosing your business over a competitor.

Viral Sharing

Social media is one of the most common ways people communicate with each other. When customers receive a coupon, they can share the offer with their friends on Facebook, Twitter, or through an SMS message–Thus viral sharing becomes an opt-in generation tool without any additional effort or advertising on your end.

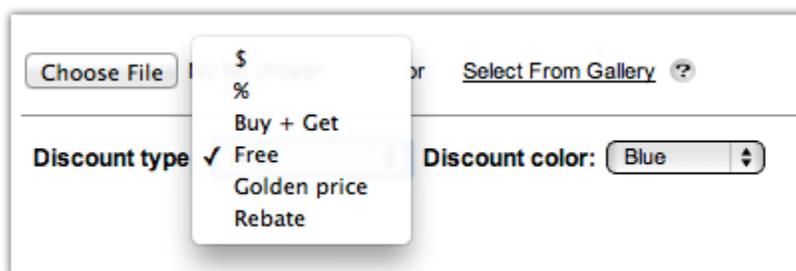

Barcodes for quick processing

You can use barcodes to track the use of your coupon! Scan the code from a phone upon redemption, and the point of sale system will recognize it and apply the appropriate deduction. If you don't use barcodes, you can use a promotional code instead.

Choose your Discount Type

What kind of discount do you want to offer? Dollar amount off? Percentage? Free? Give your customers a good deal, and you'll be swimming in business.

Many Locations? No Problem.

Branch codes allow a business with different locations to keep track of each one separately. Enable this feature and customers will be instructed to enter a branch code in order to redeem the coupon. You can view the coupon's redemption by each location. This feature assists in informing which of a business' locales needs to attract more users to your opt-in list.

Branch Code Management

Add a Branch

Branch Code	Branch Name	Ad
495	Branch One	1 Main St. New York NY 1234
496	Branch Two	2 Main St. New York NY 1234
